Minecorp designs, manufactures and installs light vehicle safety solutions to protect employees working in harsh environments.

Your Minecorp equipped vehicle will be safe, robust and compliant backed by extensive research and development. Minecorp's single source solution and large capacity operation gets your vehicle on site sooner.

# WHY WE DO WHAT WE DO

Minecorp is passionate about minimising the loss of life and injuries sustained in the workplace in relation to light vehicle applications. We work hard to contribute to quality outcomes for the industry.

Minecorp's industry knowledge and technical expertise has enabled us to reduce the complexity of work site access compliance.

# INTRODUCING MINECORP M\PASS

Minecorp M-Pass is a simple, three-stage program for vehicle safety compliance. It provides anyone requiring light vehicle fit-outs with knowledge, choice, and a no-fuss experience from order to delivery.

# Vehicle selection:

- Vehicle format (2x4/4x4) engine, suspension, seating, payload, GVM, towing capacity, airbags, stability control
- Vehicle task requirements
- Journey management plan
- Occupant placement and skill set requirements
- Access to parts and servicing

Minecorp's technical resource and combined years of vehicle knowledge can assist with your company's choice of fleet vehicle.

# M-Pass package:

- What country, state or province will the vehicle be registered (it may be unregistered)
- What assets or workplace environments will be accessed
- Comply with your company OH&S Policy, Catastrophic Risk Management (CRM) or Fatal Risk Control Protocol (FRCP)
- Compliance with your company's vehicle build specifications
- Communications, monitoring and technology needs

# 3 Select your Minecorp distributor:

- Receive your individually part numbered M-Pass vehicle build specification
- Ordering, scheduling and logistics
- Installation, compliance, programming and M-Trace

Minecorp ensures the consistent supply of compliant light vehicles to site is easy, allowing you to focus on your business. We are committed to understanding your needs to deliver a tailored vehicle fitout, including an M-Pass vehicle fitout specification. Each package receives a unique inventory number to reduce the stress associated with reordering or replacing parts after vehicles are in service.

For more information or to make an appointment visit www.minecorp.com.au or contact head office on +61 7 3723 1000.

4 \ MINECORP WE ARE VEHICLE SAFETY **\** 5

To reduce the complexity of work site compliance Minecorp offers three easy-to-order light commercial vehicle packages: M-Pass Essentials, M-Pass Industry and M-Pass Endurance.

Select the best package for your light vehicle needs depending upon your company's OH&S policies and protocols, application of use, and regulatory jurisdiction. M-Pass packages meet minimal compliance, yet provide flexibility to tailor your own vehicle needs.

# **RELIABILITY**

Minecorp's ISO 9001 accreditation assures systems are in place to deliver consistent, quality outcomes for each and every M-Pass fit-out.

Regardless of fleet size, consistency of fit-out improves vehicle familiarity, minimising driver distraction and risk of an accident.

# **FLEXIBILITY**

M-Pass provides the confidence that your choice of vehicle package will meet the specific workplace site requirements, whilst allowing you to easily add safety and functionality options for additional security.

# **CAPACITY**

M-Pass provides the added benefit of developing your vehicle and company's individually part-numbered fit-out specification, making re-ordering easy. Just quote one unique part number and your next vehicle is built to your specification. Our network is equipped with facilities and technical capacity to complete large volume fleet fit-outs.

# **COST SAVINGS**

Pre manufactured and packaged product means we are able to expedite fit out times, reducing the time your vehicle needs to be on our premises.

Minecorp's single source philosophy saves you the management time of finding multiple suppliers to equip your vehicle to the required compliance specification. We do all the work for you.

Our engineering practices ensure your vehicle's integrity is maintained throughout the fit out process. We don't modify or weld to your chassis, or drill external holes in the roof or B pillars. We leave the vehicle as close to original as possible. This means you achieve a higher resale value at decommissioning.

As a result of these initiatives, the whole of life vehicle costs are reduced, saving you time and money.

# M\PASS ESSENTIALS

M-Pass Essentials supports light commercial vehicles with basic safety solutions to meet the majority of minimum site access requirements with a focus on government and large fleets.

# M\PASS INDUSTRY

This package is tailored to meet the specific requirements identified by industries such as construction, civil infrastructure and resource sectors. M-Pass Industry adds additional safety components such as lighting, suspension, load-carrying and operator equipment.

# M\PASS ENDURANCE

M-Pass Endurance is Minecorp's extreme safety package. It is designed for harsh environments and remote travel applications for use in the minerals and exploration sectors. This comprehensive package covers all emergency equipment including communication, visibility and electrical requirements.

7 6 MINECORP WE ARE VEHICLE SAFETY

Safety and compliance starts with the selection of the right vehicle. The following vehicle types, makes and models, are ideally suited to Minecorp's M-Pass packages.
